WORK EXPERIENCE - BOOTCAMP

Project 1: Anime Database

(Feb 2023 - Mar 2023)

Anime Database is an online database for anime and manga, where users can search, read story briefs and sign up to create their watchlists & read lists.

Technologies used: React, Mongoose, GraphQL, HTML, CSS, JS, Bootstrap, Rest API, nodejs

- Created a user authentication function using the JWT library and built a database using mongoose for storing user information.
- Created an API for calling data from the database using graphql.
- Used React framework to create a number of reusable components like the navigation bar and top anime page.
- Fetched data from third-party API to populate top anime and manga cards on the front end.
- Used React Hooks inside functional components to decrease complexity and improve the maintainability of the system.
- Styled the website using CSS and bootstrap to make it mobile-responsive.
- Collaborated with the team for creating project structure.
- [Git Hub](#)

Project 2: Custom PC Builder

(Dec 2022 - Jan 2023)

Custom PC Builder is a website that can be used to build dream custom PCs where users can log in or sign up to obtain knowledge on various parts and their prices. It also provides users with pre-built options to select and compare against.

Technologies used: HTML, CSS, JS, Rest API, node.js, No SQL(sequelize), handlebars

- Created a database using sequelize library and built relations between tables.
- Used the express library to create routes for GET, POST, DEL, and PUT requests.
- Fetched data from the database by calling API using the fetch function.
- Developed a signup page to capture user details and used it for user authentication.
- Created a login/signup functionality using connect-session-sequelize.
- [Git Hub](#)

Project 3: Workout Builder

(Oct 2022 - Nov 2022)

Workout Builder is a website for beginners and workout enthusiasts to learn about exercise options based on different muscle groups and the right methods to perform these exercises.

Technologies used: HTML, CSS, Bootstrap, JS, Rest API

- Created the structure of the homepage and navigation bar using HTML.
- Styled the website using CSS & Bootstrap.
- Developed a modal popup form on the homepage where user can enter their details, and select muscle groups.
- Defined a function for setting user data in the local storage once they click submit button.
- Collaborated with the team for creating a project structure and UI.
- Created multiple wireframes using adobe xd.
- [Git Hub](#)

WORK EXPERIENCE - FREELANCE WEB DESIGNER AND DEVELOPER

Clickworthy (Canada)
